

# Smart Home

## Smart Lock

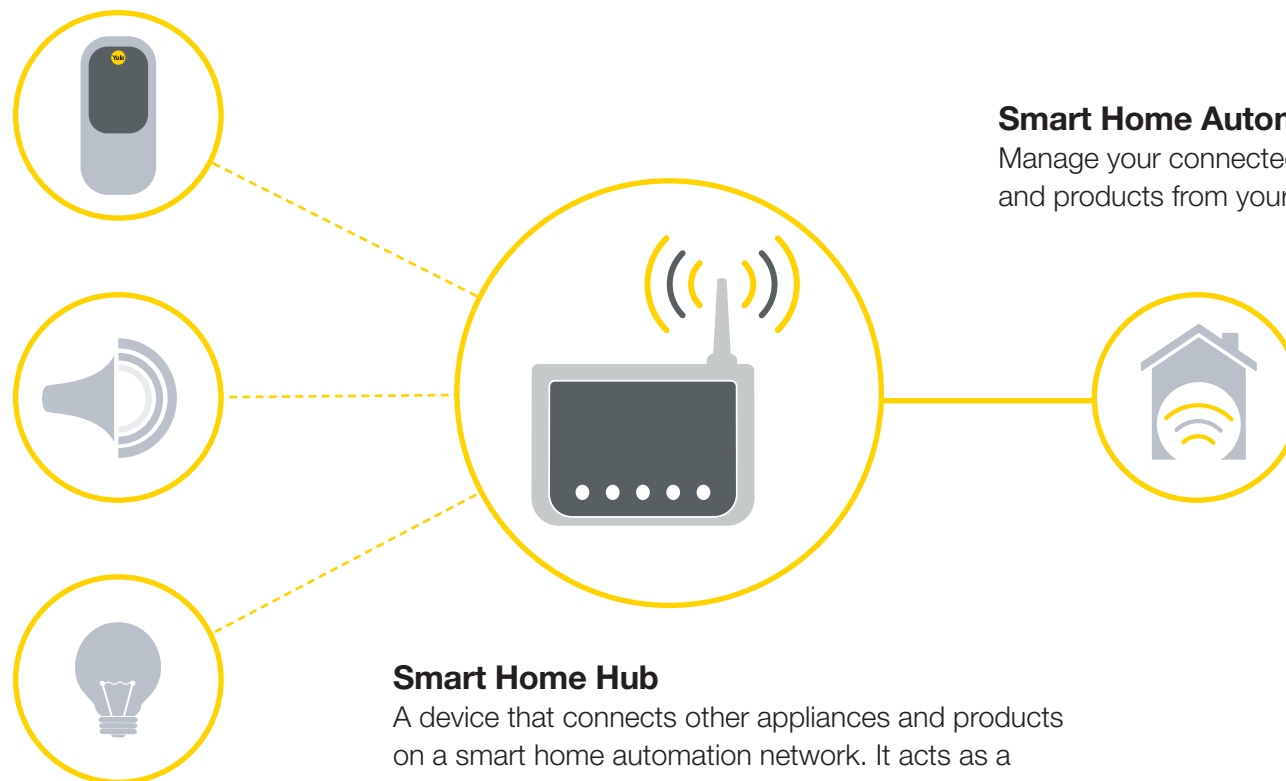

A digital door lock that opens wirelessly without the need for a tangible key. Manage who has access via smartphone and app.

## Smart Alarm

Wireless alarm system that can be extended for additional functionality according to preferences.

## Smart Appliances

Smart appliances can be controlled via an app or connected to home automation network. Once appliances and products are connected, the smart home hub allows you to gain centralised control over your home.

## Smart Home Hub

A device that connects other appliances and products on a smart home automation network. It acts as a central point for communicating between devices, using smart home protocols Zigbee® and Z-Wave®

## Smart Home Automation

Manage your connected appliances and products from your smart device.

## Benefits

### Safety

Have the peace of mind of knowing your family has arrived home safely.

### Security

Receive notifications from connected devices, for instance when an alarm is triggered.

### Monitoring

Control your home from anywhere in the world. Remote viewing on a smartphone or tablet.\*  
\*Internet connection required

### Convenience

Centralised control over your household appliances, lighting systems and digital door locks.
